

Thai Recipe AI Assistant

Problem Statement

Background

Many users struggle to find authentic Thai recipes matching ingredients, dietary preferences, and cooking skills. Traditional recipe websites provide static information without personalized assistance.

Problem Statement

Current recipe platforms lack intelligent, real-time guidance. Users spend excessive time searching recipes, understanding cooking steps, and finding ingredient substitutes.

Need for the Solution

An AI-powered assistant is needed to understand natural language, recommend recipes, answer cooking queries, and provide personalized guidance.

Proposed Solution

Integrate IBM watsonx AI, Langflow, and Agentic AI to deliver conversational recipe recommendations, ingredient substitution, and step-by-step cooking support.

Benefits

- Personalized recommendations
- Faster recipe search
- Interactive AI chatbot
- Smart ingredient suggestions
- Improved user experience
